

DATA FLOW DIAGRAM

* SIRAS service includes import of Demographic, Contact information and Table C files into SIRAS from sFTP site. As well as export of current state of Table A, B, C data to the sFTP site. Exports can be used for offline SIS/SIRAS data comparison or to selectively update Special Ed. Data in SIS. (District is responsible for getting data file to sFTP site.)

** Custom Export/Import File: SIRAS has the ability to import custom data from an SIS or send custom exported data to an SIS and use the sFTP site as the intermediary platform to bridge the two systems. Setting up a custom file in either direction would require scope of work and setup cost. Possible maintenance fee depending upon the complexity of the request.
